## News Release

### **Software To Systems and DWT Help Physicians Adopt and Implement EMR by Partnering together Transcription, HL7 and EMR as ONE Solution, Through Technology Described as “Discrete Data Transcription”**

**Cincinnati/Atlanta (2010) –Software To Systems, Inc. and D.W. Medical Transcription Services, Inc.** have years of combined experience providing solutions to Physicians. Their knowledge of the clinical documentation needs for an office to create medical notes without disrupting the flow of the patient visits is now going to a new level.

**Software To Systems, Inc. and D.W. Medical Transcription Services, Inc.** have recently collaborated to simplify the charting style of electronic health records while allowing small Physician groups of 1 to 10 doctors adopt and implement electronic charting with little or no interruption in their clinical charting style. This technology creates what is referred to as “single note synchronization”, unlike many other EMR’s of its kind.

This new partnership will use Dynamic Processing Technology (Discrete Reportable Transcription) to synchronize data across patient charts. The doctors will be able to continue dictating (if they so desire) the patient visit with no change whatsoever to the way that they are currently practicing medicine. A DRT enabled EHR takes transcribed output and enters it directly into the patient’s clinical chart as discrete recordable data, meaning the documentation can be queried for statistics, graphing, reporting and contributes to a “Full EHR” system!

Studies reveal that template based charting could distract from important cognitive workflow for providing care, thus limiting thoughtful review and analysis. DRT allows practices to view clinical data without giving up “narrative dictation”.

According to research, the top two reasons that EMR adoption and implementation are no further along are *COST* and *DISRUPTION OF THE PRACTICE*. These two companies have

found a solution to these problems. A concise plan with an attainable goal, a strong support system for guidance and training will result in a “phased in” approach and a successfully implemented EMR.

Physicians reap all the benefits of an efficient way to run the clinical side of the patient visit while continuing their current methods of practicing medicine! Other benefits include staff having access to the clinical chart, improved / integrated clinical documentation, coding, reporting to create graphs, outcome reports, historical information, track health maintenance, view current medications and much more.

### ***About STS***

**Software To Systems, Inc.** established in 1989, began transitioning small medical practices and individual physicians from the manual “pegboard” office system to computerized practice management systems. STS offers technologically advanced products and services encompassing outsourcing of accounts receivable, medical billing, in-house practice management, electronic medical records, laboratory interfaces, HL7 compatible interfaces, data conversions, implementation strategies, onsite training, support and much more, making Software To Systems a “**MULTI SOLUTIONS COMPANY**”! The sales division of STS works on transitioning doctors to a paperless system integrating patient billing with their preferred charting style. An optimum valued EMR is offered for most medical specialties designed with the user in mind and relying on a user-friendly interface with powerful and dynamic features. The result.... improved documentation quality and increased productivity. **For more information visit** <http://www.software2sys.com/drt>

### ***About D.W. Medical Transcription Services, Inc.***

D.W. Medical Transcription Services, Inc., is a company that is located in Atlanta, Georgia, offering transcription services to medical facilities nationwide.

Established in February of 1993, D.W. Medical Transcription Services, Inc. has created a team of dedicated professionals to work diligently every day to meet the needs of companies in search of medical transcription services.

With a client base consists of a broad range of medical specialists, surveys with clients have shown that they will continuously have extraordinary growth in such a competitive market. For more information, visit <http://www.dwmedtran.com/index.html>.
